Part V : Seismic Design

Chapter 1 General	1
1.1 Scope	1
1.2 Definition	1
1.3 Basic Principles of Design Calculation	3
1.4 Investigation	4
1.5 Matters to be Described in Design Documents	5
Chapter 2 Basic Principles of Seismic Design	7
2.1 Fundamentals of Seismic Design	7
2.2 General Matters on Seismic Design	11
2.3 Classification of Importance of Bridges	15
Chapter 3 Loads to be Considered in Seismic Design	16
3.1 Loads to be considered in Seismic Design and their Combinations	16
3.2 Effects of Earthquake	17
Chapter 4 Design Earthquake Ground Motions	19
4.1 General	19
4.2 Level 1 Earthquake Ground Motion	20
4.3 Level 2 Earthquake Ground Motion	23
4.4 Modification Factor for Zones	27
4.5 Ground Type for Seismic Design	34
4.6 Base Ground Surface for Seismic Design	36
CHAPTER 5 Verification of Seismic Performance	39
5.1 General	39
5.2 Limit States of Bridges for Seismic Performance Level 1	42
5.3 Limit States of Bridges for Seismic Performance Level 2	42
5.4 Limit States of Bridges for Seismic Performance Level 3	49
5.5 Basic Principles of Members Critically Affected by Earthquakes	51
5.6 Verification Method of Seismic Performance	53
5.7 Unseating Prevention Measures of Bridge Superstructure	57

CHAPTER 6	Verification Methods of Seismic Performance	
	Based on Static Verification Method	61
6.1	General	61
6.2	Calculation Methods of Loads in Static Verification Method	62
6.2.1	General	62
6.2.2	Inertia Force	63
6.2.3	Calculation of Natural Period	68
6.2.4	Seismic Earth Pressure	77
6.2.5	Seismic Hydrodynamic Pressure	82
6.3	Verification of Seismic Performance Level 1 for Earthquake Ground Motion	89
6.3.1	General	89
6.3.2	Calculation Method of Inertia Force	89
6.3.3	Design Horizontal Seismic Coefficient	92
6.3.4	Verification of Seismic Performance Level 1	95
6.4	Seismic Performance Verification Level 2 Earthquake Ground Motion	97
6.4.1	General	97
6.4.2	Calculation Method for Inertia Force	98
6.4.3	Design Horizontal Seismic Coefficient	99
6.4.4	Force Reduction Factor	104
6.4.5	Verification of Seismic Performance Level 2 or Level 3	107
6.4.6	Verification of the Seismic Performance of Reinforced Concrete Piers	110
6.4.7	Verification of the Seismic Performance of Pier Foundations	114
6.4.8	Verification of the Seismic Performance of Abutment Foundations	118
6.4.9	Verification of the Seismic Performance of Superstructures	119
6.4.10	Verification of the Seismic Performance of Bearing Supports	120
Chapter 7	Verification Methods of Seismic Performance Based on Dynamic	
	Verification Method	121
7.1	General	121
7.2	Earthquake Ground Motions for Dynamic Analysis	124
7.3	Analysis Method and Analytical Models	134
7.3.1	Analysis Method	134
7.3.2	Modeling of Bridge and Structural Members	134
7.4	Verification of Seismic Performance	145
Chapter 8	Effects of Seismically Unstable Ground	151

8.1	General	151
8.2	Geotechnical Parameters of Extremely Soft Layer and Liquefiable Sandy Layer ..	152
8.2.1	General	152
8.2.2	Assessment of Extremely Soft Soil Layer in Seismic Design	153
8.2.3	Assessment of Soil Liquefaction Affecting Bridge	153
8.2.4	Reduction of Geotechnical Parameters	162
8.3	Verification of Seismic Performance for Liquefaction-induced Lateral Spreading Affecting a Bridge	164
8.3.1	General	164
8.3.2	Calculation of Lateral Spreading Force on Foundations	168
Chapter 9	Verification of Seismic Performance of Seismically Isolated Bridges	172
9.1	General	172
9.2	Structural Design for Seismically Isolated Bridges	173
9.3	Verification of Seismic Performance of Seismically Isolated Bridges	179
Chapter 10	Seismic Horizontal Strength and Allowable Ductility Factor of Reinforced Concrete Piers	182
10.1	General	182
10.2	Evaluation of Failure Mode of a Single-Column type Reinforced Concrete Pier; its Seismic Horizontal Strength and Allowable Ductility Factor; and Nonlinear Hysteretic Model Used for Dynamic Analysis	185
10.3	Calculation of Horizontal Strength and Displacement of Single-column Type Reinforced Concrete Piers	195
10.4	Stress-Strain Curve and Critical Compression Strain of Concrete, and Stress-Strain Curve and Allowable Strain of Reinforcement	209
10.5	Shear Strength of a Reinforced Concrete Pier	217
10.6	Seismic Horizontal Strength and Allowable Ductility Factor of Rigid-Frame Type Reinforced Concrete Pier, and its Nonlinear Hysteretic Model Used for Dynamic Analysis	223
10.7	Seismic Horizontal Strength and Allowable Ductility Factor of Reinforced Concrete Piers under Eccentric Loads of the Superstructure and Nonlinear Hysteretic Model Used for Dynamic Analysis	229
10.8	Structural Details for Securing the Ductility of Reinforced Concrete Piers	234
10.9	Cut-off of Longitudinal Reinforcement	248

Chapter 11 Seismic Response and Allowable Value of Steel Columns	251
11.1 General	251
11.2 Verification of Seismic Performance by Dynamic Analysis	253
11.3 Nonlinear Hysteretic Model, Yield Displacement, and Horizontal Strength of Steel Column	257
11.4 Stress-Strain Curves of Steel and That of Concrete to Be Filled into Steel Column and Allowable Strain of Steel	263
11.5 Structural Details	269
11.6 Design for Anchorage Block	273
Chapter 12 Seismic Response and Allowable Values of Pier Foundations	275
12.1 General	275
12.2 Calculation of Sectional Force, Displacement, and Subgrade Reaction Force of Pier Foundations	280
12.3 Yielding of Pier Foundations	284
12.4 Calculation of Foundation Response in Case of Plastic Hinges Generating in Pier Foundations	285
12.5 Allowable Ductility Factor and Allowable Displacement of Pier Foundations ..	290
12.6 Verification of Members in Pier Foundations	292
Chapter 13 Seismic Response and Allowable Value of Abutment Foundations on Liquefiable Soil	293
13.1 General	293
13.2 Design Horizontal Seismic Coefficient for Verification of Abutment Foundations ..	296
13.3 Calculation of Response Ductility Factor of Abutment Foundations	298
13.4 Allowable ductility factor of Abutment Foundations	300
13.5 Verification of Members in Abutment Foundation	301
Chapter 14 Evaluation of Seismic Response and Allowable Values of Superstructures, and End Superstructure	302
14.1 General	302
14.2 Steel Superstructure	305
14.2.1 Modeling for Calculating Strength, Allowable Deformation, and Seismic Response	305
14.2.2 Structural Details	306

14.3	Concrete Superstructure	307
14.3.1	Modeling for Calculating Strength, Allowable Deformation, and Seismic Response	307
14.3.2	Structural Details	311
14.4	Ends of Superstructure	312
14.4.1	Joint Gap between Two Adjacent Girders	312
14.4.2	Expansion Joints	318
Chapter 15	verification of Bearing Supports	322
15.1	General	322
15.2	Fundamental Requirements for Bearing Supports	324
15.3	Modeling of Bearing Supports	329
15.4	Design Seismic Force for Verification of Bearing Support	333
15.5	Performance Design of Bearing Support System	340
15.6	Structural Details of Bearing Support	345
Chapter 16	Unseating Prevention System	347
16.1	General	347
16.2	Seat Length	362
16.3	Unseating Prevention Structure	369
16.4	Lateral Displacement Confining Structure	373
16.5	Structural Details	376
